

the benefits of delivering your course online

Online learners have more control over their pace and progress

32% faster rollout of new IT systems

18% increase in employee engagement

Users absorb up to **5 times** as much content during the same time frame

online induction case study

Our client ran a mandatory IT induction for its new employees, delivered face-to-face on a weekly basis. electra converted this into an online induction.

The initial investment for the **online induction** was 49% more than the initial investment in the classroom training had been.

2015

2014

2013

But it has resulted in a **93% saving** each year in ongoing training costs they no longer need – including the costs of trainer time, administration time, and the printing of handout materials.

Over a five year period this is an estimated saving of

£160,000

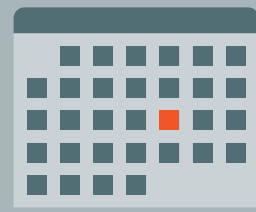

Not including the savings in their employees time. It now takes a new employee **1 hour** to complete the induction. In the classroom, it took 4.

This also doesn't include savings made in travel and accommodation costs. Offshore employees had been brought onshore to complete their induction. The online version can reach every single user, **wherever they are**.

This also doesn't include savings made in **efficiency**. New employees can take their induction straight away at a time that fits into their schedule. Up to speed more quickly: they're a productive member of the team sooner.

There's also more effective tracking and administration for an important mandatory course. Gone is the manual, labour-intensive process of meeting invites and sign in sheets. In its place: an automatic enrollment and reporting process - tracking the users progress throughout and keeping an electronic record indefinitely.
